Starting little shifts today goes a long way.

As a child grows, their smile grows with them. And even with baby teeth, it may be the perfect time for children ages 6 to 10 to start orthodontic treatment. This is known as Phase 1 treatment.

At this stage, doctors can see issues that may need early treatment to address a developing problem.

invisalign® first

 **invisalign®**

Phase 1 treatment for growing children with a mix of baby and permanent teeth.*

Phase 2 treatment for pre-teens and teens when most or all permanent teeth have erupted.

*Retainers are recommended in between phases while waiting for the permanent teeth to grow in and after Phase 2 is completed to help retain the corrections made.

Advantages of Phase 1 treatment.

The goal of Phase 1 treatment is to develop young jaws and/or arches to make room for existing teeth and for incoming permanent teeth.

- Can prevent pre-existing bite issues from getting worse
- Can fix existing teeth straightening conditions
- Can improve the appearance of a growing child's smile
- Can correct oral habits such as thumb sucking or tongue thrusting
- Can make Phase 2 treatment shorter and easier

Typically, Phase 1 treatment is addressed with traditional appliances. Thanks to the latest innovation in Invisalign® technology, you now have more treatment options.

Introducing Invisalign® First treatment.

Our clear aligner treatment is designed for predictable results and a positive experience while addressing the unique needs of growing children – aligning their teeth while expanding their arches and making room for existing teeth and incoming permanent teeth.

Little smiles deserve a treatment designed just for them.

A simple start.

Invisalign® First treatment starts with a simple scan or impressions. From there, every step of your child's plan is digitally plotted, so you know what to expect. Plus, your orthodontic insurance may cover up to 50% of treatment cost.*

A happier experience.

Removable aligners mean there's little interruption to your child's life and the foods they love. Plus, the aligners are specifically designed to fit smaller teeth and with space to accommodate teeth that are growing in.

A bigger smile.

As they progress through their treatment, you'll see their smile transform through a series of small, expertly designed shifts calculated for how little teeth should move.

*Many dental insurance plans cover Invisalign treatment just as they would other orthodontic treatments. Ask your doctor about how to use your orthodontic insurance coverage to pay for Invisalign treatment.

Made for all sorts of smiles.

Invisalign® First clear aligners can fix a broad range of teeth straightening issues, including crowding, spacing, and narrow dental arches.

No food restrictions.

With Invisalign First clear aligners, there's no missing out on popcorn at the movies. Children can continue to eat what they want.

No change to hygiene routine.

Growing children can continue to brush and floss without hassle, keeping their good hygiene habits on track.

Proven smile-changing power.

When your child gets Invisalign treatment, they're in great company. Invisalign technology has transformed over 5 million smiles worldwide.

Turn their little smile into a big, beautiful one. Speak to your doctor today about Invisalign First treatment.
